Show HN: Algeon – Compose GPU graph, vector, and ML algorithms in SQL

HackerNews 50% HN 2

Algeon is a query engine built on Apache DataFusion that exposes NVIDIA's cuGraph, cuVS, and cuML as SQL table functions. It doesn't write its GPU kernels. Instead, it takes what NVIDIA already has and embeds it into DataFusion, so you can call those GPU operations on any...

Voice AI in vogue: Nvidia releases new open transcription model

TechCrunch AI 50%

Nvidia just released a free speech-to-text model that can transcribe up to 40 languages, but it only works on recordings, not live audio, so it’s a big step for meeting and medical transcription tools while still leaving real-time use to rivals like ElevenLabs.
